

Lettas

POS system in a class of its own

The POS system is what counts; and this is particularly true for public petrol stations. This is where it all comes together. Therefore, it must be accordingly equipped in the most user-friendly manner possible. The equipment includes, amongst other things, a touch-screen, a clearly structured software interface, extensive data backup (additional boot disk and Acronis system for permanent storage), language setting per cashier, freely programmable keyboard configuration or the online inventory audit and display.

The POS system Lettas contains three segments:

- **Biskas - PROVEN FLEXIBILITY**
- **WaWi - THE MANAGER**
- **Tascom - THE CONTROLLER**
- Tankcheck (optional)
