

Hectronic is one of the top suppliers for parking space management solutions due to a combination of market experience and technological expertise. The mechanical Kienzle parking meter set the benchmark for modern technology when parking first became an issue over 50 years ago. It was replaced by two successful automated solutions.

Due to constant innovation, the company made the move from electronic devices to communications technology, computer, internet and so the move to software solutions went without a hitch. Today round about 40000 parking meters of Hectronic are in action.

London

exhibition centres in the capital have benefited from hassle-free parking management thanks to CITEA Pin with 'chip and PIN' card reader.

Frankfurt

500 parking ticket machines have so far been installed in Germany's centre of finance.
